Professional Workshop Manual - English Translation

Baltmotors - ENDURO_MOTARD_QM_200_GY_V1

1. Preface

Congratulations on purchasing a BM (Bi-Em) motorcycle, model ENDURO/MOTARD 200/250. The most advanced technologies have been used in the manufacture of these motorcycle models, thereby ensuring its reliable operation, ease of use, and new style and design. Riding a motorcycle is one of the most exciting activities. Before riding a motorcycle, read this manual carefully. This manual offers the correct measures for maintaining and keeping the motorcycle in good condition. Following all instructions and requirements contributes to the long-term, trouble-free operation of your motorcycle. Qualified personnel in the sales departments of our dealers and service centers are authorized to perform warranty and service maintenance of your motorcycle.

Note

The ENDURO/MOTARD motorcycle model has been certified for compliance with the Technical Regulations on the Safety of Wheeled Vehicles. The design of the motorcycle fully complies with safety standards and the limit content of harmful substances in exhaust gases.

2. Important Precautions

Information on running in motorcycles.

The first 1000 km of mileage is the most important stage throughout the entire service life of your motorcycle. During this period, proper operation of your motorcycle will not only extend the life of your motorcycle, but also make it better. The surfaces of mating parts will be lapped.

Careful and accurate operating techniques during run-in guarantee safe driving and normal operation of your motorcycle. Particular attention should be paid to measures that prevent the engine from overheating. Refer to the "Running in the Motorcycle" section and follow all its recommendations.

Please carefully study this manual and carefully follow all precautions and instructions.

Terms

The terms "Warning", "Caution", and "Attention" are used in this manual to draw attention to important information. Read these sections carefully.

Warning

Instructions regarding driver safety. Failure to follow these instructions may result in injury to the driver or road accidents.

Caution

Instructions regarding motorcycle protection. Neglecting these instructions or measures may result in damage to your motorcycle.

Attention

Instructions regarding motorcycle maintenance or explanations of other important information.

3. Warnings and General Information

3.1 Safety precautions for drivers

Riding a motorcycle is a great pleasure. For your well-being, please follow traffic rules and follow all instructions, as well as follow the five rules below:

3.1.1 Use of a safety helmet Safe motorcycle riding begins with the use of a helmet, which is a very important accessory for the driver. A high-quality safety helmet is the driver's first protective tool, as the most dangerous accidents are head injuries. Please use a helmet equipped with special protective glass when riding your motorcycle.

3.1.2 Familiarity with the motorcycle device Your driving skill and knowledge of the motorcycle device are the key to safe driving. Practice in specially designated places where there is no other traffic.

3.1.3 Knowing Your Speed Limit The speed of movement is selected according to the road condition, your driving skill and the weather. Knowing the speed limit helps to avoid accidents.

3.1.4 Using comfortable clothing Loose and uncomfortable clothing can make riding a motorcycle dangerous for you. Riding in ordinary clothes can interfere with your legs and does not allow you to move freely. Gloves, special motorcycle clothing and a helmet show that you are a qualified driver. Use high-quality clothing that fits snugly on your figure.

3.1.5 Attention when driving on a wet road

You must be especially careful when riding a motorcycle in the rain. Keep in mind that the braking distance on a wet road is longer than on a dry road. Avoiding places on the road covered with oil, paint, dirt, you will prevent slipping. Never turn the motorcycle sharply during acceleration. Be careful when passing through railway tracks and bridges, etc., it is necessary to drive at a sufficient distance from the vehicles in front so as not to collide during emergency braking.

4. Location of Identification Numbers

1 Chassis number

2 Location of VIN plate

3 Engine number

Frame and engine numbers are required when the motorcycle is registered. The numbers are also needed when ordering certain parts or for obtaining special services from our company or authorized dealers. The identification number is printed on the vertical tube of the frame along the steering axis on the right side and the manufacturer's plate.
