2. Important Precautions

Motorcycle Break-in Information

The first 1,000 km of mileage is the most important stage throughout the entire service life of your motorcycle. During this period, proper operation of your motorcycle will not only extend its service life, but also make it better. The surfaces of the mating parts will be lapped. Careful and accurate operating techniques during break-in guarantee safe riding and

and General Information3. Warnings and General Information

3.1 Safety Precautions for Drivers

Riding a motorcycle is a lot of fun. To ensure your safety, please observe traffic regulations and follow all instructions, as well as follow the five rules below:

3.1.1 Use of a Safety Helmet

Motorcycle safety begins with the use of a helmet, which is a very important accessory for the driver. A high-quality and certified helmet is the driver's first protective tool, as the most dangerous accidents are head injuries. Please use a helmet equipped with a special protective visor when riding your motorcycle.

3.1.2 Familiarization with the Motorcycle Device

Your driving skill and knowledge of the motorcycle device are the key to safe riding. Practice in specially designated places where there is no other traffic.

3.1.3 Knowing Your Speed Limit

The speed of movement is selected according to the condition of the road, your experience in driving a motorcycle, and the weather. Knowing the speed limit helps to avoid accidents.
